

ABSTRACT

[Abstract]

[Problems] There are provided a device and a method for telephone countermeasure in using a telephone during driving which can automatically suppress communication of only a driver in a vehicle.

[Means For Solving Problems] The device for telephone countermeasure includes a database (3), a driver judgment unit, and a mode switching unit. The database (3) contains driver face data (3-1) and a telephone number (3-2) of a mobile telephone (7) used by the driver for each of the drivers. The driver judgment unit identifies the current driver of the vehicle in the database (3) by the face authentication. The mode switching unit extracts the telephone number (3-2) of the mobile telephone (7) used by the identified driver from the database (3) and switches the mobile telephone (7) of the driver to a drive mode such as a message recording mode by using the telephone number.
